Mapping Respondents by Residence

The first plot illustrates respondents by Borough.

The second plot illustrates a more granular geographic distribution of respondents. The one zip code with the highest proportion of respondents is 10025, a zip code that includes a portion of Columbia University. However, it is important to note that 17% of respondents are the only representative from their zip code.

The third plot illustrates geographic distribution of the 293 respondents with children. Here, 45% respondents are the sole representative of their zip code.
